Equinoxe

Equinox reimagines the concept of the chandelier as a composition of spheres, slender rods and pinpoint lights, which create a three-dimensional geometry in the space through reflections, transparencies and carefully balanced visual weights.

The **G4** micro-bulb minimises the light-emitting element
and produces small points of light
which the glass **amplifies, reflects and softens.**

Equinox is a striking decorative feature, ideal for residential or hotel interiors where a rich and refined touch is sought, capable of enhancing tables, kitchen islands, living areas, relaxation zones and lounges.

The collection includes single pendant lights in three diameters, multiple pendant lights, wall lights and floor lamps, all characterised by a sense of structural lightness, formal grace and a **precious luminosity**.
