84~150W Constant Voltage + Constant Current LED Drive

##  <br> Features

- Constant Voltage + Constant Current mode output
- Metal housing design with functional Ground
- Built-in active PFC function
- No load / Standby power consumption <0.5W
- IP67 / IP65 rating for indoor or outdoor installations
- Function options: output adjustable via potentiometer; 3 in 1 dimming (dim-to-off); Smart timer dimming; DALI;
Auxiliary DC output
- Typical lifetime>50000 hours
- 5 years warranty

## - Description

ELG-150 series is a 150 W AC/DC LED driver featuring the dual mode constant voltage and constant current output. ELG-150 operates from 100~305VAC and offers models with different rated voltage ranging between 12 V and 54 V . Thanks to the high efficiency up to $91 \%$, with the fanless design, the entire series is able to operate for $-40^{\circ} \mathrm{C} \sim+90^{\circ} \mathrm{C}$ case temperature under free air convection. The design of metal housing and IP67/IP65 ingress protection level allows this series to fit both indoor and outdoor applications. ELG-150 is equipped with various function options, such as dimming methodologies, so as to provide the optimal design flexibility for LED lighting system

|  | PACKING |  | 0.95Kg ; 16pcs/16.0kg/0.77CUFT |  |  |  |  |  |
| NOTE | 1. All parameters NOT specially mentioned are measured at 230 VAC input, rated current and $25^{\circ} \mathrm{C}$ of ambient temperature. <br> 2. Please refer to "DRIVING METHODS OF LED MODULE". For DA-Type, Constant Current region is $60 \% \sim 100 \%$ of maximum voltage under rated power delivery. <br> 3. Ripple \& noise are measured at 20 MHz of bandwidth by using a 12 " twisted pair-wire terminated with a 0.1 uf \& 47 uf parallel capacitor. <br> 4. Tolerance : includes set up tolerance, line regulation and load regulation. <br> 5. De-rating may be needed under low input voltages. Please refer to "STATIC CHARACTERISTICS" sections for details. <br> 6. Length of set up time is measured at first cold start. Turning ON/OFF the driver may lead to increase of the set up time. <br> 7. The driver is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again. <br> 8. This series meets the typical life expectancy of $>50,000$ hours of operation when Tcase, particularly (tc) point (or TMP, per DLC), is about $80^{\circ} \mathrm{C}$ or less. <br> 9. Please refer to the warranty statement on MEAN WELL's website at http://www.meanwell.com. <br> 10. The ambient temperature derating of $3.5^{\circ} \mathrm{C} / 1000 \mathrm{~m}$ with fanless models and of $5^{\circ} \mathrm{C} / 1000 \mathrm{~m}$ with fan models for operating altitude higher than $2000 \mathrm{~m}(6500 \mathrm{ft})$. <br> 11. For any application note and IP water proof function installation caution, please refer our user manual before using. https://www.meanwell.com/Upload/PDF/LED_EN.pdf <br> 12. To fulfill requirements of the latest ErP regulation for lighting fixtures, this LED power supply can only be used behind a switch without permanently connected to the mains. <br> 13. ELG-150-12(except blank/A-Type) is used for any light source that exempt from the ErP-Directive (EU) 2019/2020 requirement, for example this model could be use for signalling products(including, but not limited to road-, railway-, marineorair traffic-signalling , traffic control or airfield lamps) . <br> ※ Product Liability Disclaimer : For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx |  |  |  |  |  |  |  |

## Block Diagram

PFC fosc : 50~120KHz PWM fosc : 60~130KHz

## DRIVING METHODS OF LED MODULE

※ This series is able to work in either Constant Current mode (a direct drive way) or
Constant Voltage mode (usually through additional DC/DC driver) to drive the LEDs

Typical output current normalized by rated current (\%)
© This characteristic applies to Blank/A/B/AB/DX/D2/BE-Type,
For DA-Type, the Constant Current area is $60 \% \sim 100 \%$ Vo.

## DIMMING OPERATION

- Dimming source current from power supply: $100 \mu \mathrm{~A}$ (typ.)
(o) Applying additive $0 \sim 10 \mathrm{VDC}$

"DO NOT connect "DIM- to Vo-"

© Applying additive 10 V PWM signal (frequency range $100 \mathrm{~Hz} \sim 3 \mathrm{KHz}$ ):

() Applying additive resistance:

Dimming input: Additive resistance
Note : 1. Min. dimming level is about $8 \%$ and the output current is not defined when $0 \%<$ Iout $<8 \%$.
2. The output current could drop down to $0 \%$ when dimming input is about $0 \mathrm{k} \Omega$ or 0 Vdc , or 10 V PWM signal with $0 \%$ duty cycle.
※ DALI Interface (primary side; for DA-Type)

- Apply DALI signal between DA+ and DA-.
- DALI protocol comprises 16 groups and 64 addresses.
- First step is fixed at $8 \%$ of output.

## ※ Smart timer dimming function (for Dxx-Type by User definition)

MEAN WELL Smart timer dimming primarily provides the adaptive proportion dimming profile for the output constant current level to perform up to 14 consecutive hours. 3 dimming profiles hereunder are defined accounting for the most frequently seen applications. If other options may be needed, please contact MEAN WELL for details.

Ex: © D01-Type: the profile recommended for residential lighting

Set up for D01-Type in Smart timer dimming software program:

|  | T1 | T2 | T3 | T4 |
| :--- | :---: | :---: | :---: | :---: |
| TIME** | $06: 00$ | $07: 00$ | $11: 00$ | --- |
| LEVEL** $^{*}$ | $100 \%$ | $70 \%$ | $50 \%$ | $70 \%$ |

**: TIME matches Operating Time in the diagram whereas LEVEL matches Dimming Level.
Example: If a residential lighting application adopts D01-Type, when turning on the power supply at 6:00pm, for instance:
[1] The power supply will switch to the constant current level at $100 \%$ starting from 6:00pm.
[2] The power supply will switch to the constant current level at 70\% in turn, starting from 0:00am, which is 06:00 after the power supply turns on.
[3] The power supply will switch to the constant current level at $50 \%$ in turn, starting from 1:00am, which is 07:00 after the power supply turns on.
[4] The power supply will switch to the constant current level at 70\% in turn, starting from 5:00am, which is 11:00 after the power supply turns on. The constant current level remains till 8:00am, which is 14:00 after the power supply turns on.

Ex: © D02-Type: the profile recommended for street lighting

Set up for D02-Type in Smart timer dimming software program:

|  | T1 | T2 | T3 | T4 | T5 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| TIME** $^{*}$ | $01: 00$ | $03: 00$ | $8: 00$ | $11: 00$ | --- |
| LEVEL** $^{*}$ | $50 \%$ | $80 \%$ | $100 \%$ | $60 \%$ | $80 \%$ |

**: TIME matches Operating Time in the diagram whereas LEVEL matches Dimming Level.
Example: If a street lighting application adopts D02-Type, when turning on the power supply at 5:00pm, for instance:
[1] The power supply will switch to the constant current level at $50 \%$ starting from 5:00pm.
[2] The power supply will switch to the constant current level at $80 \%$ in turn, starting from 6:00pm, which is 01:00 after the power supply turns on.
[3] The power supply will switch to the constant current level at 100\% in turn, starting from 8:00pm, which is 03:00 after the power supply turns on.
[4] The power supply will switch to the constant current level at 60\% in turn, starting from 1:00am, which is 08:00 after the power supply turns on.
[5] The power supply will switch to the constant current level at $80 \%$ in turn, starting from 4:00am, which is 11:00 after the power supply turns on. The constant current level remains till 6:30am, which is 14:00 after the power supply turns on.

Ex: © D03-Type: the profile recommended for tunnel lighting

Set up for D03-Type in Smart timer dimming software program:

|  | T 1 | T 2 | T 3 |
| :--- | :--- | :--- | :--- |
| TIME** $^{*}$ | $01: 30$ | $11: 00$ | --- |
| LEVEL** $^{*}$ | $70 \%$ | $100 \%$ | $70 \%$ |

**: TIME matches Operating Time in the diagram whereas LEVEL matches Dimming Level.
Example: If a tunnel lighting application adopts D03-Type, when turning on the power supply at 4:30pm, for instance:
[1] The power supply will switch to the constant current level at $70 \%$ starting from 4:30pm.
[2] The power supply will switch to the constant current level at 100\% in turn, starting from 6:00pm, which is 01:30 after the power supply turns on. [3] The power supply will switch to the constant current level at 70\% in turn, starting from 5:00am, which is 11:00 after the power supply turns on. The constant current level remains till 6:30am, which is 14:00 after the power supply turns on.

## - OUTPUT LOAD vs TEMPERATURE(Note.9)
